## **DETAILED ACTION**

### ***Election/Restrictions***

Claims 4-10 are withdrawn from further consideration pursuant to 37 CFR 1.142(b), as being drawn to a nonelected invention, there being no allowable generic or linking claim. Applicant timely traversed the restriction (election) requirement in Paper No. 6.

### ***Drawings***

The drawings are objected to under 37 CFR 1.83(a). The drawings must show every feature of the invention specified in the claims. Therefore, the conductive trace on a printed circuit board must be shown or the feature(s) canceled from the claim(s). No new matter should be entered.

A proposed drawing correction or corrected drawings are required in reply to the Office action to avoid abandonment of the application. The objection to the drawings will not be held in abeyance.

### ***Claim Rejections - 35 USC § 103***

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 1-3 and 12-21 are rejected under 35 U.S.C. 103(a) as being unpatentable over Noguchi et al. [JP 02-66910] in view of Kiesel et al. [US 4,623,865].

Noguchi et al. discloses a transformer [figure 1] comprising :

- a toroidal magnetic core having at least one winding [1] wound about the core thereby forming a wound core;

- additional single turn winding [2] of conductive material formed to at least partially enclose the wound core, wherein the single turn winding formed of two sheets of conductive metallic material.

Noguchi et al. discloses the instant claimed invention except for the addition winding formed of a single sheet of metallic material.

Kiesel et al. discloses a current transformer [figure 1] including a single turn winding formed of a single piece of conductive material [11].

It would have been obvious to one having ordinary skill in the art at the time the invention was made to use a single piece one turn winding design of Kiesel et al. for the addition winding of Noguchi for the purpose of facilitating manufacturing.

It would have been obvious to one having ordinary skill in the art at the time the invention was made to form the single turn winding from one single sheet of metallic material for the additional single turn winding of Noguchi et al. since it has been held that forming in one piece an article which has formerly been formed in two pieces and put together involves only routine skill in the art. *Howard v. Detroit Stove Works*, 150 U.S. 164 (1893).

Regarding claims 2 and 18, Noguchi et al. discloses the addition winding provides substantially uniform distribution of current around the core annulus.

Art Unit: 2832

Regarding claims 12 and 20, Noguchi et al. discloses the additional winding substantially encloses the core and the first winding.

Regarding claims 15 and 21, Noguchi et al. inherently discloses terminal portions [4, 4a] of the additional winding adapted to be connected to traces/pads of a printed circuit board to complete the winding structure.

### *Conclusion*

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.
